

WT Hotels have Eco-Tech rooms for you

We have seen many intelligently and environment sensitively structured buildings in the past, but for the first time a home décor has also been equally thoughtfully planned and decorated. An amalgamation of nature and technology, the WT Hotel project is a partnership between Well Tech Studio and many other material partners that has led to the creation of the eco-friendly cum high tech room. The outcome is a smart window that can be dimmed with liquid crystal, electrochromic and suspended devices, thus ignoring the need for traditional curtains. Touch screen controls are available to change the mood of their room via Jonas Samson designed LED embedded wallpaper, with entertainment offered with BRAVIA series Sony displays. [\[Core77\]](#)]
